(54) Title: ISOLATED COMMUNICATION SAMPLE PROCESSING SYSTEM AND METHODS OF BIOLOGICAL SLIDE PROCESSING

(57) Abstract: A sample processing system 101 that may be automated and methods are disclosed where a number of sample processing systems 101, such as stainer, may be connected to a number of separate full function computers 181 through a stainer network 183 that may be isolated from other communication traffic. A network configuration may permit scalability and addressability so that additional sample processing systems 101, additional separate full function computers 181, and additional other devices such as label printers 200 may be easily added to the system. One or more remote information links 171 may be provided so that information transfer on a continuous or perhaps constant basis can be accommodated.
